

HPRS CURRICULUM MAP

SUBJECT AREA: Mathematics

YEAR / GROUP: 11 – aimed at grade 9 - 6

BRIEF SUMMARY OF CURRICULUM INTENT

Our main aim in mathematics in HPRS is to give students the best possible chance to enjoy and succeed in mathematics in such a way that will positively impact on their lives post 16. We believe that maths is not only about numbers, equations etc but is about real understanding and we work with students to help them see that by studying mathematics/numeracy they can make a real difference to their future prospects. Maths has a structure that can be learnt through practical applications and we plan lessons to be as “hands-on” and problem solving as possible to increase student participation and self esteem. As enthusiastic teachers we hope to convey our enjoyment of the subject and the fun in the topic in a way that brings the teaching moment into focus.

It is the intent that the mathematics curriculum at HPRS is:-

- A curriculum that is ambitious for all students
- A curriculum that is coherently planned and sequences
- A curriculum that is successfully adapted, designed and developed for students with special educational needs, and/or disabilities
- A curriculum that is broad and balanced for all students

The curriculum delivery in mathematics relies on:-

- Embedding quality teaching a learning opportunities in lessons with increased thinking time planned for students before the need to respond
- Marking in such a way that it is personalised to identify and correct misconceptions in student friendly language
- Assessing progress regularly and reporting this to parents/carers each term
- Comparing student progress with their individual learning profiles
- Supporting student who are struggling to work in the mathematics room by offering 1 : 1 support with a TA
- Monitoring students who are being taught separately from the main cohort by supplying resources to support the staff working towards the Functional Skills qualification with students
- Purposeful questioning provoking discussion within the lessons.

How SMSC and British Values are delivered in this subject

Spiritual – encourage interest in the power of mathematics in everyday life and use spiritual examples to exemplify this – Rangoli patterns in symmetry and tessellation, Fibonacci sequence and the golden ratio etc.

Moral – teachers provide good role models on how to interact with each other and students are encouraged to value the contributions of other students without judgement. Handouts and worked examples avoid stereotypes regarding gender, race, sexual orientation etc.

Social – students in seating plan to facilitate good working practise, collaboration and the opportunity to work with students from a variety of different backgrounds. Work within the British values of rule of law, individual liberty and mutual respect of each other.

Cultural – students are taught methods for mathematics from around the world such as the Singapore Bar Method, the Chinese lattice method of multiplication etc. Students learn about the traditional methods of mathematics which their parents/grandparents/carers may have been taught as part of the “teaching for mastery” initiative.

KEY DATES / NOTES

Assessment will be a mixture of on-going formative assessments and summative assessments at the end of specific topics.

Questioning throughout lessons will take place and marking will be timely and detailed.

A combination of these, along with teacher judgement, will form a RAG rated entry half termly on the assessment tracker and this will be reported back to parents/carers at the end of each term

Assessments will be a combination of Corbett maths past papers, BKSb assessments and AQA past papers

| | <p>make links to similarity (including trigonometric ratios) and scale factors. Apply the concepts of congruence and similarity, including the relationships between lengths, areas and volumes in similar figures</p> <p>Express a multiplicative relationship between 2 quantities as a ratio or a fraction</p> <p>Understand and use proportion as equality of ratios Relate ratios to fractions and to linear functions Solve problems involving direct and inverse proportion, including graphical and algebraic representations Understand that X is inversely proportional to Y is equivalent to X is proportional to $\frac{1}{Y}$; construct and interpret equations that describe direct and inverse proportion Interpret the gradient of a straight line graph as a rate of change; recognise and interpret graphs that illustrate direct and inverse proportion</p> | <p>Direct and inverse proportion</p> | | |
